University of Windsor
School of Computer Science

Course: COMP.8157
Professor: Dr. Andreas S. Maniatis
Term: 2026F

COMP.8157: Advanced Database Topics

Group Project: ADT Application – D.3.1.1. Team Contribution Form

Team No: 07

ID	Name	Contribution
1	Shashang Patel (patel3cd@uwindsor.ca)	**50% —** Led storage and blocking: Docker environment (MongoDB 8.2, mongot, Ollama); ingestion and normalization of the benchmark datasets with tokens, blocking keys and embeddings; the four blocking access paths (B-tree, multikey, $search, $vectorSearch) and their profiling with explain(); the fixed-plan end-to-end prototype and Streamlit page (T1–T7, T12). Co-authored D.2.1, D.4.1, D.4.2 and D.3.1; reviewed matcher pull requests.
2	Nauman Syed (syed9i@uwindsor.ca)	**50% —** Led matching and optimization: string-similarity rule matcher, Fellegi–Sunter model fitted by EM, random-forest matcher, and the local LLM tier with the llm_cache verdict cache (T8–T11); now leading matcher profiling and plan estimation for the cost-based optimizer (T13–T14). Co-authored D.2.1, D.4.1, D.4.2 and D.3.1; reviewed blocking and storage pull requests.
